

Pool Features

With so much to offer we're confident your customers will see the many advantages of owning a Lomart Pool.

Premium Copper Bearing Steel. The premium steel core used for Lomart Pool walls and frames is “copper bearing” to enhance the steel and provide first-rate corrosion resistance.

Alkaline Cleaned. A cleaning treatment for premium copper bearing steel which removes grease, oil, and dirt accumulated during processing and prepares the steel for additional treatments. Applied twice to each side of the wall or frame for maximum protection.

All Lomart Pools receive

Tuff-Kote™, Lomart's Hot-Dipped

Galvanized Zinc Protective Coating. This unique coating is an important part of Lomart's intensive multi-part wall and frame treatment and is designed to enhance and protect the pool wall and frame.

Bonderized Zinc Phosphate. A sprayed chemical treatment for both sides of the steel which is essential for superior paint-to-steel adhesion and excellent resistance to corrosion.

Chromate Anti-Rust. A chemical anti-rust rinse which follows the Bonderized Zinc Phosphate treatment to clean and enhance the steel while creating a stronger paint/steel bond.

Primer Coat. This preliminary paint coating is essential for superior base and print coat adhesion.

Double-Kote™. A process designed to add luster, durability and corrosion resistance to Lomart Pools.

This multi-part wall and frame treatment represents the two-part application of premium-grade baked enamel color coatings.

The top rails and verticals for certain Lomart Pools receive **Gard-Kote™**, a plastisol-textured protective coating which adds extra luster to the frame while providing excellent resistance to rust and corrosion.

Polyester Clear Coat. An extra protective coating, available on all painted wall models, which seals and protects the base and print coats against ultra-violet penetration and allows for more effective weatherization.

Certain Lomart Pool models are further protected with a heavy gauge vinyl laminate on the pool wall and/or frame. This vinyl laminate enhances beauty and increases the longevity of the pool.
